Subject Index

activation analysis 233
AES 347, 437
aluminium doped molybdenum 437
analysis of glasses 387
analysis of tungsten 261
analytical electron microscopy 93, 125
atomic spectrometry 261
Auger 409
Auger analysis 401
Auger electron spectroscopy 429
Auger spectrometry 135
automation in analytical chemistry 151

brazed joints 409

carbide 201
charge compensation 497
checker-board technique 371
chemometrics 445
coal analysis 225
coatings 49
coercivity 115
comparative analyses 269
convergent-beam electron diffraction 93
corrosion 409
crater edge profiling 321

decoration technique 219
defect analysis 219
depth-profile analysis 445
depth profiling 85, 371, 497
depth resolution 321
determination of impurities 261
direct analysis of melts 151
distribution analysis 477

effect of trace impurities on metal properties 233
electron beam induced processes 321
electron energy loss spectrometry 93
electron energy—loss spectroscopy 125
electron microprobe analysis 225
electron microscopy 115
electron probe microanalysis 135
elemental analysis 275, 295
element analysis 309
energy-dispersive X-ray spectrometry 93
EPMA 211
expert systems 445

flame and graphite furnace atomic absorption spectrometry 233
fluorescence 455

γ' isolates 201
GDMS 275
glass surface 365
glow discharge 302
glow discharge mass spectrometry 275, 295

high purity coal 225
high purity gallium 269

high resolution Auger electron spectroscopy 321
high-resolution electron microscopy 93
high-temperature corrosion 49
high-temperature gas-cooled reactor 5
high-temperature materials 5
hopeite 355
HTR 5

ICP-atomic emission spectrometry 233
indium phosphide 169
injection method AAS 201
InP 347
insulating samples 497
ion bombardment 169
ion energy distribution 387
isotope effect 179
isotope fractionation 387

laboratory and operation tests 49
lateral resolution 321
leaching 179
low energy PIXE 85

mass spectrometric methods 233
mass spectrometry 291, 302
material analysis 445
materials characterization up to 900°C 49
matrix effect 179
metal oxides 85
method "integral layer profile analysis" with EDX-/WDX-systems 49
microanalysis 125, 409
microarea 135
microcracks 219
micro region model 169
microstructure analysis 371
MIS-structures 347
multi-element analysis 151
multi-method concepts 151

niobium 71
nitriding 401
nitrocarburizing 401
nitrogen 135

oxygen in storage materials 379

permanent magnets 115
phosphate coating 355
phosphophyllite 355
physico-chemical analysis 5
plasma treatment 365
powder samples 225
precipitation 219
process analysis 151
purity control 309

quadrupole 302
quality control 445
quantitative phase analysis 211
quantitative SIMS 387

reflection 455
refractory metals 233, 291, 295, 309, 313
relation between material development and material analysis 151
röntgenbox 193
Rotating-Electrode-Process 71

sampling techniques 225
scanning Auger microscopy 321
scanning electron microscope 193
scanning electron microscopy 489
secondary neutral mass spectrometry 497
segregation 429
silicate glass 179
SIMS 179, 313, 347, 371, 379, 477
solid samples 275
spark source mass spectrometry 309
sputtering 387
standards 135
steel 135, 429, 477
superficial crystal growth 169
surface analysis 489
synchrotron radiation 455

TEM 477
thin film analysis 489
Ti-Mo-N system 211
titanium 71
tokamak fusion reactor 5
topography development 169
trace analysis 193
trace elements 477
trace impurities 261
tungsten 71, 261, 302
ultra trace analysis 291, 313
ultratrace bulk analysis 233
underclad crack 429
work function 489
XPS-analysis 365
X-ray absorption 455
X-ray fluorescence 193
X-ray intensity 193
XRD 211
